

Harbor Freight Item #40528 10 Tray Box 1 & 2

Electronics Essentials Label Instructions

These instructions explain how to install the labels for the two 10 tray boxes needed for your Electronics Essentials Kit (Numbered as boxes 1 and 2). Box 3 contains the parts for the Programming Hardware Essentials Kit and are bundled separately.

Step 1: Use the “peel and stick” stickers to label boxes 1 and 2. These labels go under the handle as shown in Figure 1.

Step 2: Cut out the labels on the following pages and adhere them to the inside of each tray’s lid using double sided tape.

Figure 1 shows how the trays should be numbered and the labels are designed to match the dividers (if any) within each tray.

Be sure to put the tape on the correct side of each label! (Figure 2)

Note: Do not force the black clips when closing your box! The clips will latch easily when the yellow tabs are aligned.

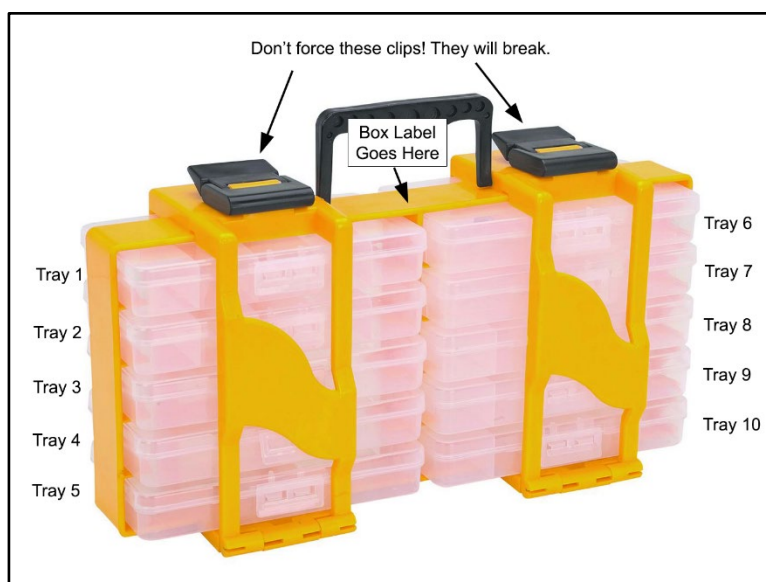

Figure 1 – Trays are numbered as shown here. Box label goes under the handle.

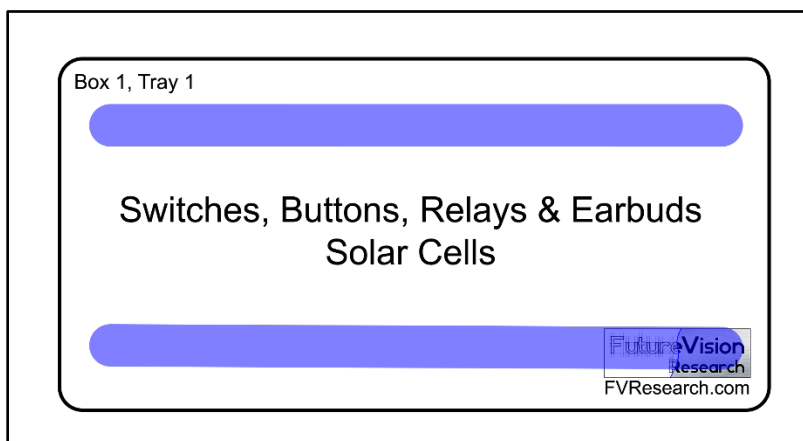

Figure 2 – The blue path shows where to place the double sided tape.
